Review Questions

Section 14.1

- 14.1 True or False? Policies determine how something will be done, mechanisms describe what will be done.

Section 14.2

- 14.2 What principle dictates that programs and users be given just enough privileges to perform their tasks?

Section 14.3

- 14.3 True or False? The need-to-know principle states that a process needs to know everything in order to perform its task.
- 14.4 True or False? The user mode/kernel mode paradigm is an example of domain switching.
- 14.5 True or False? In the UNIX operating system, a domain is associated with a process, not with a specific user.
- 14.6 What is the name of the bit in a UNIX system that associates each file with an owner and domain?

Section 14.4

- 14.7 What does each row and column represent in an access matrix?

Section 14.5

- 14.8 What is the problem when using a global table to represent an access matrix?

Section 14.6

- 14.9 What is the benefit of using role-based access control?

Section 14.7

14.10 Why is revocation of access rights easy with an access list scheme?

Section 14.8

14.11 Provide two examples of capability-based systems.

Section 14.9

14.12 Give an example of a programming language that provides language-based protection.
