

Deadlocks

Review Questions

Section 8.1

- 8.1 True or False? The system model for deadlocks first requires a process request a resource, then use the resource, and finally release the resource.

Section 8.3

- 8.2 What are the four necessary conditions for characterizing deadlock?

Section 8.4

- 8.3 Describe one strategy for dealing with deadlocks.

Section 8.5

- 8.4 What is the only reasonable condition that can be used to prevent deadlocks from occurring?

Section 8.6

- 8.5 What is the name of the state of the system if resources can be allocated to all processes in some order and deadlock can still be avoided?
- 8.6 What is the name of the classic deadlock avoidance algorithm?

Section 8.7

- 8.7 True or False? The wait-for graph can only be used for deadlock detection when there is a single instance of each type.

Section 8.8

- 8.8 Provide at least one method for recovering from deadlock.
